WIRELESS AUDIT

Aim:

To perform wireless audit on Access Point and decrypt WPA keys using aircrackng tool in Kalilinux OS.

Algorithm:

1. Check the current wireless interface with iwconfig command.
2. Get the channel number, MAC address and ESSID with iwlist command.
3. Start the wireless interface in monitor mode on specific AP channel with airmon-ng.
4. If processes are interfering with airmon-ng then kill those process.
5. Again start the wireless interface in monitor mode on specific AP channel with airmon-ng.
6. Start airodump-ng to capture Initialization Vectors(IVs).
7. Capture IVs for atleast 5 to 10 minutes and then press Ctrl + C to stop the operation.
8. List the files to see the captured files
9. Run aircrack-ng to crack key using the IVs collected and using the dictionary file rockyou.txt
10. If the passphrase is found in dictionary then Key Found message displayed; else print Key Not Found.

Output:

```
root@kali:~# iwconfig eth0  
no wireless extensions.
```

```
wlan0 IEEE 802.11bgn ESSID:off/any  
Mode:Managed Access Point: Not-Associated Tx-Power=20 dBm Retry short
```

limit:7 RTS thr:off Fragment thr:off Encryption key:off Power Management:off
lo no wireless extensions.

root@kali:~# airmon-ng start wlan0

Found 2 processes that could cause trouble.

If airodump-ng, aireplay-ng or airtun-ng stops working after a short period of time,
you may want to kill (some of) them!
