## **CAESAR CIPHER**

**Aim:** To implement encryption algorithm using Caesar Cipher technique.

### **Algorithm:**

- Step 1: Prompt the user to enter a message to encrypt (text) and the encryption key (key).
- Step 2: Iterate through each character in text, applying the Caesar Cipher encryption.
- Step 3: Print the encrypted message.

### **Program:**

```
#include <stdio.h>
```

```
int main() { char
```

```
text[500]; int
```

```
key;
```

```
printf("Enter a message to encrypt: ");
```

```
scanf("%s", text);
```

```
printf("Enter the key: ");
```

```
scanf("%d", &key);
```

```
for (int i = 0; text[i] != '\0'; ++i) {
```

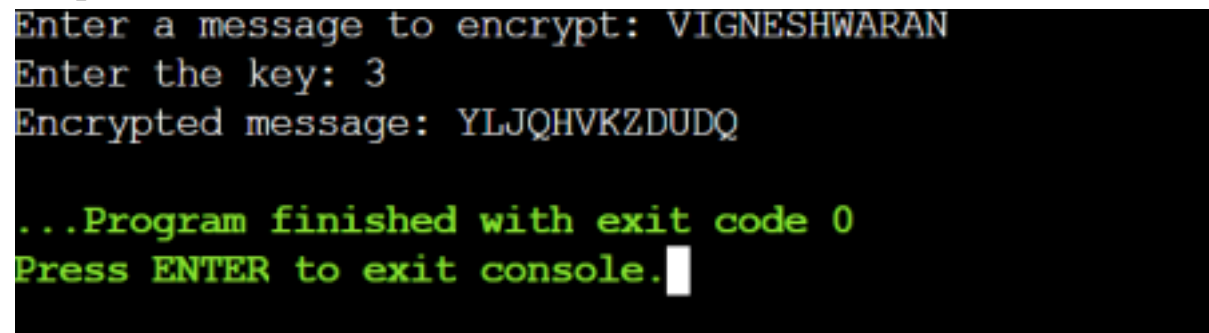

```
char ch = text[i];
```

```
if ('a' <= ch && ch <= 'z')
```

```
ch = (ch - 'a' + key) % 26 + 'a'; else
```

```
if ('A' <= ch && ch <= 'Z') ch =  
(ch - 'A' + key) % 26 + 'A'; else if  
('0' <= ch && ch <= '9')  
ch = (ch - '0' + key) % 10 + '0';  
text[i] =  
ch;  
}  
  
printf("Encrypted message: %s", text);  
  
return 0;  
}
```

**Output:**

```
Enter a message to encrypt: VIGNESHWARAN  
Enter the key: 3  
Encrypted message: YLJQHVKZDUDQ  
  
...Program finished with exit code 0  
Press ENTER to exit console. █
```

**Result:** To implement encryption algorithm using Caesar Cipher technique has been Executed successfully.
